Configurable Rotor Blade Rows

GXC Series

The large diameter rotors of the GXC series machines are available with a choice of 5, 7 or 9 rows of rotor blades to suit the specific application. They can therefore achieve the ideal combination of power and cutting efficiency, thus ensuring high throughput volumes and top quality granulated products.

V-Rotor

Our standard open V-Rotor with forward set blades is suitable for processing most types of material. The V-cutting (chevron) configuration of the forward set blades creates a highly efficient, double shear, scissor cutting action.

VR-Rote

The VB-Rotor with rear set blades is intended for lighter duty applications. The greater shear angle achieved by mounting the blade behind the blade holder results in better performance when processing flexible materials such as plastic films.

C-Roto

The C-Rotor is a heavy duty, high inertia, semi-closed shaft design which creates a cascade cutting effect. This rotor design is ideal for processing particularly hard or thicker materials, but is also well suited to processing profiles.

CC Datas

The CS-Rotor is a particularly open rotor design which allows more area for the material to fall into between each of the staggered blades. This rotor is ideal when processing hollow & bulky materials.

MC-Rotor

The GMC rotor is specially designed for film and winding material. The staggered blades can cut off the material easily. The design of the rotor creates a good air stream go through the chamber, reducing heat build up within the chamber to aid cooling.

Granulators / GC / GXC / GMC Series

Heavy Duty Granulators

GXC Series

GXC Series Heavy Duty Granulators with power ratings of 55kw to 315kw are designed for high throughput processing. With a variety of rotor configurations available, these granulators have a wide range of applications including; hollow and voluminous materials (i.e. plastic drums, crates and chairs), flexible materials such as films, woven bags and rubber, tougher materials such as profiles, thick sheets, and other general plastics.

Granulators

GC Series

GC Series Granulators are high speed granulation machines designed especially for the efficient size reduction of various materials in a single pass. These machines are ideal for processing a multitude of materials including plastics, rubber, fibers, copper cable and light non-ferrous metals amongst others.

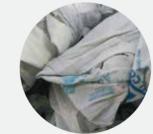

GC Series					
Model	GC600T	GC800	GC800T

Main Drive (kW)	22	30	37		
Weight(kg)	Approx 1500	Approx 1800	Approx 3000		

Granulators

GMC Series

GMC Heavy Duty Granulators are designed for high throughput size reduction of larger sized products in a single pass. These machines are specifically designed for treating plastic film or PP big bag material of high contamination. Incorporating various different methods of wear protection such as replaceable wear plates and resistant surface coatings, the GMC machines are well suited to processing abrasive, contaminated materials such as glass filled plastics and dirty films containing sands.
